

NIRANJAN S

Data Analyst

Bengaluru, Karnataka • niranjan6030@gmail.com • +91 8050730642 • linkedin.com/in/niranjan-s-8b9283306 • github.com/niranjan6030

SUMMARY

Data analyst with a strong SQL and Python foundation, in the third year of a BCA (Computer Science) at CHRIST (Deemed to be University), Bengaluru. Builds reporting and forecasting on real operational data: KPI dashboards, demand forecasting, wait-time models and an auditable inventory ledger across four shipped projects. Works in SQL, Python, Power BI, Tableau and Excel.

EDUCATION

CHRIST (DEEMED TO BE UNIVERSITY)

Bachelor of Computer Applications (BCA), Computer Science

Bengaluru, Karnataka
2024 – 2027 (Expected)

Relevant coursework: Database Management Systems, Data Structures and Algorithms, Statistics, Operating Systems, Computer Networks, Software Development Life Cycle.

SKILLS

SQL & Databases: SQL, PL/SQL, PostgreSQL, Supabase, Firebase Firestore. Joins, subqueries, window functions, CTEs, aggregation, stored procedures. Data modelling, ER diagrams, normalisation, schema design, query optimisation.

Analytics & BI: Power BI, Tableau, Microsoft Excel (pivot tables, lookups), KPI dashboards, data visualization, business intelligence reporting, data cleaning, data validation, exploratory data analysis, statistical analysis, descriptive statistics.

Forecasting & Modelling: Time-series forecasting, exponential smoothing (EWMA), trend analysis, walk-forward validation, error benchmarking (MAE), percentile and distribution analysis, queueing theory, demand analysis, recommender systems.

Programming & Tools: Python (pandas, PyTorch), SQL, JavaScript, Java, C++, ETL pipelines, Git, GitHub, Vercel, Adobe Premiere Pro.

Languages: English, Tamil, Kannada, Hindi.

PROJECTS

Smart Cafeteria | Campus Ordering Platform with Kitchen Analytics

Feb 2026 – Aug 2026

Data and analytics owner in a three-person final-year team | SQL, JavaScript, React, Firebase Firestore

- Built the demand forecasting model the kitchen plans against: order data bucketed by weekday/weekend and hour of day, smoothed with exponential smoothing (EWMA, $\alpha = 0.35$) and adjusted by a 14-day trend, clamped between 0.5x and 2x to control outliers.
- Validated forecast accuracy with walk-forward testing rather than a random split, comparing two predictors on strictly time-ordered data, accumulating MAE at every step and defaulting to the baseline when smoothing did not improve on it.
- Modelled per-stall wait times with M/M/c queueing on real order and preparation timestamps, and classified demand levels against the P50/P75/P90 of each hour's own distribution.

Grezzo | Inventory Ledger and Sales Reporting Dashboard

Aug 2026 – Present

Solo build | SQL, PostgreSQL (Supabase), Python, Next.js

- Designed the PostgreSQL data model: stock tracked per product, colour, size and warehouse as an append-only movement ledger, so every balance is auditable and reconcilable by replaying its own transaction history.
- Wrote the sales reporting console in SQL over the order and movement tables: revenue by day, average order value, abandoned checkout rate, best sellers and low-stock alerts.
- Built a recommendation engine on browsing-sequence data using an LSTM model in Python, with a statistical baseline as fallback.

Macro | Nutrition Data Pipeline and Reporting App

Aug 2026 – Present

Solo build, shipped to web, iOS and Android | SQL, PostgreSQL (Supabase), Python, Next.js

- Built the ETL and reconciliation layer: extracted nutrition data from three external sources (Open Food Facts, USDA and an internal composition table), normalised them into one schema, and ranked records by source reliability.
- Enforced data quality by tagging every record with its provenance as lab measured, from the packet, or estimate, so no figure is reported without a source.

God's View | Data Verification and UI for an Education Platform

Jan 2026 – Aug 2026

Four-person team project at CHRIST (Deemed to be University) | JavaScript, Three.js, Supabase

- Validated the scientific dataset presented to students, checking every figure against a primary source to ensure accuracy of published content.
- Refined the data presentation interface, and produced the project's promotional video.

EXPERIENCE

INTERACTIVE AVENUES

Bengaluru, Karnataka

Visual Artist, Internship

Apr 2025 – May 2025

- Produced visual and video assets for client marketing campaigns, converting written briefs into finished deliverables against fixed deadlines.
- Coordinated with the marketing team across review cycles and reorganised the project file and naming structure to improve asset reuse.

CERTIFICATIONS

PL/SQL 101, Infosys Springboard. Artificial Intelligence Ethics, Udemy (2026). AI Fundamentals, Udemy (2026). Data Structures in C++, Scaler Topics.

LEADERSHIP

Department Head of Media, SDG Cell, CHRIST (Deemed to be University)

2025 – Present

- Lead media coverage, branding and asset delivery for 4–5 department events a year, coordinating a team of student volunteers.
- Also serve as Choir Media Member, Student Welfare Office (SWO).
